

Dear Valued Customer,

This letter is to confirm that all Polymer Industries Densetec® outdoor products contain a robust 5-year UV protection package that protects the polymer chain from grazing, carbon chain cleavage, and cracking due to the sun's UV rays.

Based upon our supplier's recommendations as well as our own experience with stabilization of polyolefin materials, we expect our package to give you a 5-year protection level dependent upon the conditions where your product is used.

In addition, the pigments contain weather-able color chemistry to help minimize the color fading due to UV exposure. The color chemistry and level are important to color retention, we have been utilizing this color chemistry and UV blocker in all our Densetec® outdoors products, such as playground, cabinets, marine board, signage and anti-skid with great success and performance.

Regards,

Mohammed Jafar
Technical Manager
